

SKILLFORGE

Personalized Career Roadmap & Skill Gap Analysis System

ABSTRACT

Students often face difficulty in choosing the right career path after graduation, even when they possess basic programming and technical knowledge. They may not have clear information about the skills, tools, certifications, and project experience required for specific technology careers. **SkillForge - Personalized Career Roadmap & Skill Gap Analysis System** is a web-based application developed using Python and Django to provide personalized, skill-based career guidance.

The system allows users to create a profile with their educational background and current skills. It compares the user's skills with the requirements of different careers and generates a career match percentage. Based on the selected career, the system identifies missing skills and provides a structured skill gap analysis. It also generates a personalized learning roadmap with relevant projects, certifications, and learning milestones. A progress-tracking dashboard helps users monitor completed skills, roadmap activities, and achievements. The system also includes administrative facilities for managing platform data and monitoring user progress.

Thus, SkillForge provides an integrated platform for career recommendation, skill development, roadmap planning, and progress tracking.
